

L'huile des records du monde

LR - 12

Coolant (- 12°C)

USES

- Formulated with monoethylene glycol, distilled water and specific additives, this premixed coolant avoids hard mixing of water and antifreeze.
- Ideally suited for use in hot climates.

MAIN CHARACTERISTICS

	Units	Typical Values
Colour		Green
Aspect		Clear
Density at 20°C	Kg/m ³	1036
Protection temperature	°C	- 12
Alcalinity (20% dilution)	ml	Mini 10

The data given in this table are typical values from production and cannot be specifications in any case.

PROPERTIES & ADVANTAGES

- Compared with water, the presence of specific inhibitors allows a perfect protection against corrosion and rust.
- Good antifoam and anti-scale properties.
- Improves heat dissipation and helps engine cooling.
- Meets the requirement of ASTM D 3306 & NFR 15601 standards (except pH)
- Frost protection until -12°C

CAUTION FOR USE

- Can be mixed with other coolants of the same type
- Do not use below -10°C outside temperature. Contact us for such application.
- Harmful in case of ingestion. Content a bittering additive according to decree n° 95326-20/03/1995
